

Triple Ten AI Automation

Project: Creating a Chatbot with Zapier

Francois O Yengue

In this project, I designed and launched a fully functional hotel assistant chatbot using Zapier. The chatbot is built to help guests with common inquiries such as check-in/check-out times, room amenities, booking modifications, and more. Powered by a structured knowledge base, it delivers clear, professional, and conversational responses to frequently asked questions.

The goal was to create a user-friendly digital assistant that enhances the guest experience while showcasing practical applications of conversational AI.

Hi, do you have any rooms available for this weekend?"

Hotel Assistant Bot

1:24am

Hello! Yes, Triple Peaks Hotel does have rooms available for this weekend. To check availability and make a reservation, you can:

- Book directly through our website.
- Call our front desk at (123) 456-7890 for assistance.
- Modify or cancel bookings easily online via the confirmation email link if you already have a reservation.

If you are planning a group booking (10+ rooms) or an extended stay (7+ nights), please contact our sales team at sales@triplepeakshotel.com for special rates.

Would you like help with booking or more details about room types and rates? 🤔

"Can I book a king suite with a balcony for two nights starting Friday?"

Hotel Assistant Bot

1:26am

Yes, you can book a king suite with a balcony for two nights starting Friday at Triple Peaks Hotel, subject to availability.

Here are a few helpful details:

- Check-in time is 3:00 PM.
- Check-out time is 11:00 AM.
- You can book or modify your reservation online via the hotel's website or by calling the front desk at (123) 456-7890.
- Free cancellation is available up to 24 hours before check-in.

Ask me anything

Conclusion

Building the Hotel Assistant chatbot with Zapier was a hands-on way to explore how automation and AI can improve real-world customer service. By answering common guest questions like check-in times, amenities, and booking changes, the chatbot helps hotels save time and offer faster, more consistent support. It's available 24/7, doesn't get tired, and always stays polite—making it a reliable digital front desk assistant.

This project shows how even simple tools can create meaningful experiences when paired with thoughtful design and a clear purpose.
